- Solution Requirement Approach.
- Change Management and Master Class.
- Palo by Jedox.
- ProEO Integrated Manufacturing Performance Management Solution.
- Business Warehouse/Business Objects.
- Business Intelligence Tool Selection: Independent Survey Offering.

Solution Requirement Approach

The fundamental principle incorporated in our approach is to focus on an End to End Solution methodology, thus cascading strategic and business requirements from an Enterprise level to a Process and Business Scenario level.

The first goal before detail requirements are obtained at a process level is to ensure alignment from the process owners and stakeholders to the strategic intention as defined for the Enterprise by senior management.

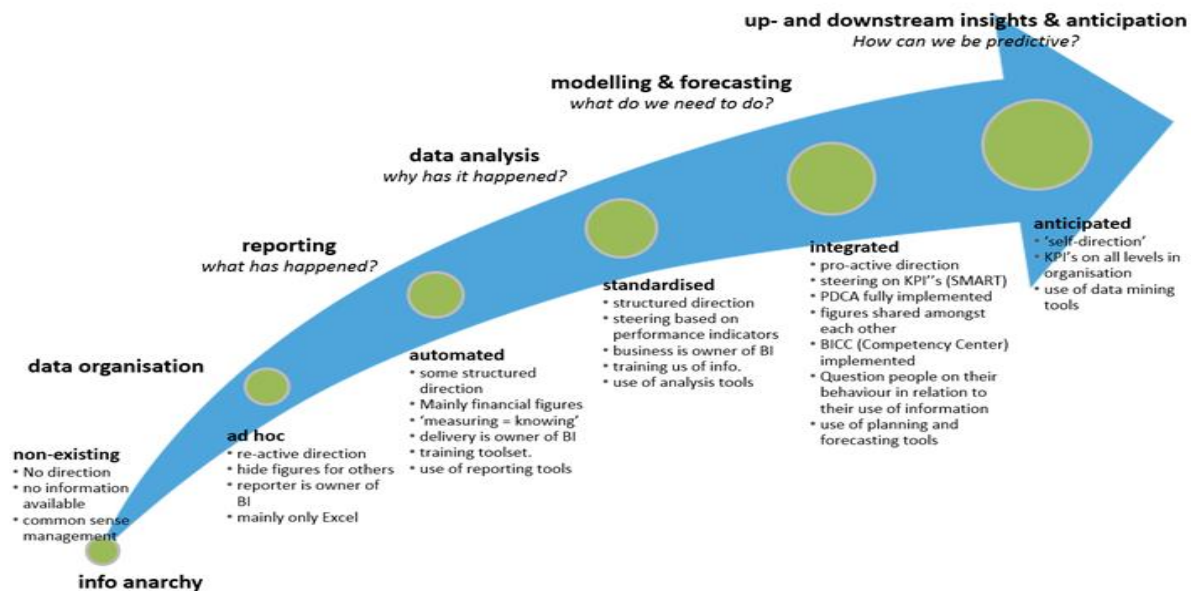

Once aligned to the enterprise strategy the next step is to gather sufficient level of business requirements at a process and business scenario level without going into an analysis paralysis exercise. The business requirements process will focus on reporting and data (business) objects related to the applicable process or business scenario and is depicted as follows:

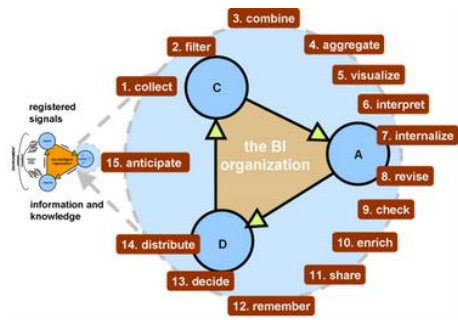

Change Management and Business Intelligence Master Class Training

The generic problem statement regarding Business Intelligence solutions in most organisations is that they have not been deployed in a systematic or consistent manner. Generic Problem Statement: Organisations have allowed individual workgroups, departments, and divisions to build their own data warehouses and data marts, purchase their own BI tools and create their own BI applications, and define key metrics, data objects, and business views in unique, nonstandard ways, thus, BI deployments remain disconnected and many organisations today are riddled with these "analytic silos."

The goal is to take your organization step by step to the next level of Business Intelligence based on a consensus agreement of the existing level as depicted below:

Master Classes

Course Content

- Big Data.
- The BICC (Business Intelligence Competency Centre).
- Business Intelligence Processes.
- KPIs (Key Performance Indicators).
- Data Quality.
- Predictive Analytics.
- Data Visualisation.
- Mobile Business Intelligence.
- Project Management.
- Data Warehouse.
- Business Intelligence Success.

PALO by Jedox

More than 500 organizations have implemented Palo by Jedox solutions. Alta Via's clients will benefit from this Business Intelligence (BI) solution that leverages their existing Excel spreadsheets and allows them to enter and manipulate data into a cost effective management accounting tool. We design and construct models that yield deep and granular insights. Those insights include highlighting idle/excess capacity, budgeting/planning tools, BI analytics and forecasting.

Business Warehouse/Business Objects

Alta Via honors its capability to deliver SAP Business Warehouse/Business Objects systems with data integrity and timely data retrieval for all reporting needs.

- Blueprinting, designing and testing.
- Offshore/Onshore supporting capability.
- Integration to ECC.
- Customized reporting such as functional reporting.
- Hands on training.
- Business training.
- Incorporating business concepts and SAP ECC design principles in training approach.
- Authorization setup.

ProEO

Alta Via Consulting is proud to be a **proEO™** Certified Reseller. With today's technology, small to mid-sized businesses no longer need a large ERP / CRM system to achieve high quality Business Intelligence extraction and reporting solutions. ProEO interfaces with your existing system(s) that uses familiar Excel-based modelling, with real-time In-memory technology, displayed in an interactive dashboard format.

Independent Survey: Passionned Group

Passionned Group is a Netherlands based analyst and Consultancy Company, they specialising in business intelligence, performance management and data integration.
